

Embassy of the United States of America
The Hague, the Netherlands

Bureau of Overseas Buildings Operations

06 November 2017

To whom it may concern:

I write to you on behalf of Campa S.R.L, in their capacity as fabricator and installer of a vehicle parking canopy structure at the recently completed US Embassy in The Hague Netherlands.

While I am professionally constrained from offering any official endorsement, I am able to say personally and without qualification that the team from Campa executed all of this work with an exceptionally high degree of technical competence and expertise. From the beginning of their involvement with the project, engineers from Campa demonstrated a remarkable willingness and ability to effectively collaborate during the refinement of design details. Wherever and whenever we discovered problems in our own concept drawings, they found elegant solutions. Campa was consistently responsive to the many questions raised, and always managed the constant demands of this work with patience and professionalism. They were intimately familiar with varied canopy details and materials, were easily able to study particularly difficult situations, and very often proposed more effective and cost-efficient fabrication details based on materials newly available to the market. Arturo Campa, along with sons Damiano, Fabbio, and Marco, took great pride in seeing that design intent remained true, and continually worked with us to meet the delivery and installation schedule.

The result was spectacularly successful, and many of the various US Government inspection teams visiting the project during the final stages of construction have said that Campa's collaborative efforts elevated the overall design of the entire facility. I look forward to working with them on a future project.

With kind regards,
